

Warehouse Management System (WMS)

Modular Warehouse Management Suite

The flexible and powerful core of Logimax, our WMS Foundation is a browser-based system that contains everything public warehouses need to be successful out-of-the-box: complete multi-customer and inventory control functionality plus integrated RF data collection, report writing and customer web self-service.

As a browser-based solution, Logimax presents managers and CSRs with an attractive user interface that increases productivity and provides anytime/anywhere access via a secure web connection. Our advanced technology also makes it quick and easy to integrate to ERP, TMS, EDI or other software systems – from SAP® to QuickBooks.

WMS Foundation

Manage your warehouse business

- Inventory Control
- Integrated Base RF
- Integrated Billing
- Rich Report Writer
- Customer Self Service

Modules

Extend your functionality

- EDI & eCommerce
- RF Task Automation
- Assemble to Order
- Yard Management
- Multi-Carrier TMS

Metrics & KPI's

Monitor performance and results like never before

- KPI's
- Revenue Analysis
- Cost Analysis
- Velocity Trends
- Much More

Warehouse Management with Logimax

Logimax is extraordinarily fast to implement – often just 30 days – even while supporting complex functional requirements. This is due to our unique approach that defines and enforces operating and item related rules, based on operational needs. For every transaction, the solution automatically enforces rules, processes, location selection, product rotation, packing, stacking and any other criteria associated with a process and or item. This remarkably efficient approach enables Logimax customers to realize a faster, better ROI on a WMS investment.

Additional Warehouse Functionality

- ◆ *Inventory* - From the ground-up, Logimax was built specifically for efficient warehouse management. With easily configurable functionality for receipts, putaways, transfers, counts and picks – based upon our easy-to-use “profiles” – Logimax enables warehouses to run more efficiently. In addition to complete inventory control functionality, Logimax's built-in intelligence recognizes item velocity, seasonality, stackability and other criteria that allow our users to maximize space utilization and efficiency.
- ◆ *Integrated, Real Time Data Collection* - The Logimax Foundation comes with RF enabled support for receiving, put away, inventory counting, inquiry and re-warehousing; and basic order picking. Using these capabilities will immediately enhance accuracy,

METRICS & KPI'S

Dashboards: Our dashboards show thumbnail views of key data at the company, warehouse and customer level in real time.

Revenue Trends: 13 and 25-month revenue trends help to monitor actual vs. forecasted performance.

Activity Trends: Activity trends help you identify resource variances and plan space and resources accordingly.

Comprehensive Transportation Functionality

- Packing
- Rate shopping
- Bill As/Ship As
- Special charges
- Compliance label printing
- Export documents
- HAZMAT compliance
- Consolidation
- Electronic manifesting
- Track and Trace
- Auditing
- Rate Updates

Freight Shipping

- Routing guide management
- Advanced carrier selection
- Pre-shipment planning
- LTL, truckload, rail rating
- Bill of Lading
- Auditing
- Tariff management

Carrier Compliance

- DHL International
- FedEx
- OnTrac
- R.R. Donnelley
- UPS
- USPS
- Over 350 LTL tariffs
- Generic carriers

accountability and traceability. And of course, Logimax RF is also fully integrated with Logimax Modules such as Logimation, Assemble to Order, Yard Management and Multi-Carrier TMS.

◆ *Rich Report Writer* - Along with a rich set of pre-defined reports that can be printed, faxed or e-mailed, Logimax includes a built-in drag and drop report designer. Selecting from a long list of pre-defined templates, the user simply selects the content, sequence and layout to meet the reporting requirement. The created report can be kept as a private report or can be shared with all users. Logimax's open database architecture allows you to also implement third party report writers.

◆ *Web Self Service* - Being able to quickly and cost-effectively meet customers' inventory data needs is essential in a "need it now" world. Your employees, sales team and customers will have the ability to retrieve key reports such as .pdf files or spreadsheets, enter orders and view activity and inventory at their convenience.

Modules

Logimax modules enable companies like yours to increase productivity and efficiency and ultimately improve your strategic value as a trading partner. Each Logimax module seamlessly integrates with our WMS Foundation and is quick-to-implement.

EDI & Ecommerce

Supporting Electronic Data Interchange (EDI) is required by most companies because it enhances the efficiency, accuracy, speed and traceability associated with transmitting data to and from trading partners. Our EDI module presents data in an understandable format so that CSRs can resolve issues without intervention from supervisors, customers or IT staff, and enables integration with SAP and FTP based transactions as well as formal X12 EDI.

Logimation – Wireless Task Automation

A major advancement in WMS functionality, Logimax' Wireless Task Automation module provides companies with on-the-fly task assignment and real-time, paperless task visibility for every warehouse activity. Logimax assigns tasks (via RF) that consider a user's login and equipment as well as pre-defined rules, task priorities and the Logimax Appointment Book.

Assemble to Order

Kitting, assemble-to-order and related light-manufacturing services are an effective way to generate new revenue from existing customers, attract new business, and deliver more value to customers' supply chains. Our Assemble-to-Order Module includes a comprehensive bill of material (BOM), cost and budget analysis, work order and shift planning.

Yard Management

Logimax Yard Management (YMS) module provides companies with the ability to track trailers' and containers' pertinent data, including who brought it in, where it is, what's on it, how long it's been there, where it's supposed to be, and when it's supposed to be there.

Multi Carrier Transportation Management Solution (TMS) – Varsity Logistics

Varsity ShipSoft-Parcel™ and ShipSoft-Freight™ support a wide array of shipping needs—from companies with single carrier domestic shipments to multi-site organizations that ship globally through multiple parcel, LTL, truckload, and rail carriers. With Varsity, companies purchase only the functionality they require. When

both parcel and freight shipping are needed, Varsity ShipSoft-Parcel and ShipSoft Freight integrate for centralized shipping management

About Us:

Since 1995, Logimax Inc. has provided its customers with an exceptionally robust, reliable and affordable solution to the challenges of the single and multi-customer warehousing industries. Logimax offers a browser-based solution and an uninterrupted growth path for our customers.

Logimax is based in Jacksonville, Florida, and has offices in Chicago and San Francisco. It is part of the FOG Software Group, a wholly owned subsidiary of Constellation Software, Inc. (TSX:CSU), an international provider of software and services to multiple industries across public and private sectors.
